Amendments to the Claims:

Please cancel Claim 34 and amend Claims 32 and 35 as follows:

Claims 1-16 (Cancelled).

17. (Previously Presented) A method for retrieving information, comprising:
sending a request identifying a first site, and range data defining a distance from
the first site; and
receiving trip planning information selected based on the identified site and the range
data.

18. (Previously Presented) The method of claim 17, wherein the trip planning
information includes information identifying a location of interest within a proximity of the first
site derived from the range data.

C\ 19. (Previously Presented) The method of claim 17, wherein the trip planning
information includes information identifying services available within a proximity of the first site
derived from the range data.

20. (Previously Presented) The method of claim 17, wherein the request further
includes a second site, and wherein the trip planning information includes information
identifying a location of interest associated with the second site.

21. (Previously Presented) The method of claim 17, wherein the request further
includes a second site and second range data defining a distance from the second site, and
wherein the trip planning information includes information identifying selected locations of
interest within a proximity of the first and second sites.

Appl. No.: 09/698,077
Filed: October 30, 2000
Page 3

22. (Previously Presented) The method of claim 20, wherein the locations of interest each provide services similar to services provided by the second site.

23. (Previously Presented) A method for searching and retrieving information, comprising:
receiving a request identifying a first site and range data defining a distance from the first site;
selecting trip planning information based on the identified first site and the range data;
and
outputting the selected trip planning information.

24. (Previously Presented) The method of claim 23, wherein the trip planning information includes information identifying a location of interest within a proximity of the first site derived from the range data.

C1
25. (Previously Presented) The method of claim 23, wherein the trip planning information includes information identifying services available within a proximity of the first site derived from the range data.

26. (Previously Presented) The method of claim 23, wherein the request further includes a second site, and wherein the trip planning information includes information identifying a location of interest associated with the second site.

27. (Previously Presented) The method of claim 23, wherein the request further includes a second site and second range data defining a distance from the second site, and wherein the trip planning information includes information identifying selected locations of interest within a proximity of the first and second site.

Appl. No.: 09/698,077
Filed: October 30, 2000
Page 4

28. (Previously Presented) The method of claim 27, wherein the locations of interest each provide services similar to services provided by the second site.

29. (Previously Presented) A method for retrieving information, comprising:
sending a request identifying at least a first site, a second site and a type of location of interest; and
receiving information associated with the first and second sites and selected based on the type of location of interest and selected using a geometric shape generated based on the first and second sites.

30. (Previously Presented) The method of claim 29, wherein the information includes information related to locations of interest that are associated with the type of location of interest identified in the request, wherein the locations of interest are located within the geometric shape.

C 31. (Previously Presented) The method of claim 29, wherein the geometric shape is generated based on a first distance value representing the distance between the first and second sites, and a second distance value representing a function performed on the first distance value.

32. (Currently Amended) A method for searching and retrieving information, comprising:
receiving a request including a site and a type of location of interest;
determining a range for the site based on stored information associated with the type of location of interest, wherein determining a range includes varying the range based on the number of locations of interest located within a predetermined distance of the site; and
providing trip planning information based on the range, the type of location of interest and the site.

Appl. No.: 09/698,077
Filed: October 30, 2000
Page 5

33. (Previously Presented) The method of claim 32, wherein the trip planning information includes locations of interest located within the range of the site, and wherein the locations of interest are associated with the type of location included in the request.

34. (Cancelled).

35. (Currently Amended) A method for retrieving information, comprising:
sending a first request including a site and a type of location of interest; and
receiving trip planning information selected based on a range, the site and the type of location of interest, wherein the range is variable and is based on stored information associated with the type of location of interest.

C 36. (Previously Presented) The method of claim 35, wherein the trip planning information includes locations of interest located within the range of the site, and wherein the locations of interest are associated with the type of location of interest included in the request.

37. (Previously Presented) The method of claim 36, wherein the range is based on the number of locations of interest located within a predetermined distance of the site.

38. (Previously Presented) A method for searching and retrieving information, comprising:
receiving a request identifying at least a first site, a second site and a type of location of interest;
generating a geometric shape based on the first and second sites; and
sending information associated with the first and second sites and selected based on the type of location of interest.

39. (Previously Presented) The method of claim 38, wherein sending information includes:

Page 6

collecting information related to locations of interest that are associated with the type of location of interest identified in the request, wherein the locations of interest are located within the geometric shape.

C\ 40. (Previously Presented) The method of claim 38, wherein generating the geometric shape includes:
determining a first distance value between the first and second sites;
performing a function on the first distance value to produce a second distance value; and
generating the geometric shape based on the first and second distance values.
